SUMMARY

Data analyst with 3+ years as the direct analytics partner to business stakeholders, currently the Patient Experience leaders across AdventHealth's markets. I own the work end to end: gather and manage requirements, find the decision hiding behind the request, get to the answer in Snowflake without hand-holding, and ship a dataset or dashboard the team can trust afterward. Built the validation tooling that cut a monthly refresh cycle from roughly two weeks to three days, and led my team's adoption of AI agents, including a custom GPT that put self-serve answers in stakeholders' hands. Comfortable without fully formed requirements; when I don't understand why a number is what it is, I dig until I do.

EXPERIENCE

Business Analyst I | AdventHealth *May 2025 – Present (contract, converted to full-time Aug 2025)*

- Own the analytics relationship with Patient Experience (PX) leaders across AdventHealth markets: gather and manage requirements, push back on the half-formed ask to find the decision behind it, scope the analysis, and deliver custom data the field can act on.
- Balance competing requests from multiple market stakeholders at once, setting expectations on scope and timing, documenting what a number does and does not say, and keeping leaders aligned from intake through delivery.
- Spearheaded AI adoption for the analytics team: built AI agents and shaped a custom GPT that PX leaders use to query patient-experience data themselves, putting answers at their fingertips instead of in a request queue.
- Helped shape and design a new data model so the analytics team could own its own data, removing the dependency on other teams to refresh our dashboards.
- Built two dashboards from the ground up and rebuilt a legacy dashboard on that model, consolidating separate reports into a single slicer-driven view (disconnected selector table, DAX SWITCH measures).
- Built validation tools that automated the monthly refresh check of incoming Press Ganey survey data across every service line, cutting validation from roughly two weeks to three days.
- Work independently in Snowflake, sourcing, profiling, and reconciling data with little documentation to lean on, and tracing discrepancies between raw source data and what dashboards report.
- Plan and ship in an agile environment, working in sprints tracked in Wrike.

Data Analyst | FirstSource *Jan 2022 – May 2025*

- Built SQL-based reporting on quality, compliance trends, and vendor performance, and owned the Power BI dashboards non-technical policy, training, and operations teams relied on day to day.
- Fielded research requests from the field, digging into the issue behind the number, then procuring and packaging custom data pulls for the teams that asked.
- Ran QA audits on review workflows, surfacing gaps and tightening accuracy, and fed the findings back into process.
- Translated business context into analysis and data reality into plain language for cross-functional partners.

SKILLS

SQL & Warehouse SQL, Snowflake, data modeling, semantic / star-schema design, data validation & reconciliation

BI & Reporting Power BI (extensive), DAX, Power Query, dashboard design, metric & KPI definition, Excel

AI & Automation AI agents, custom GPTs, prompt engineering, verifying agent output against source data, process automation

Also Python (Pandas, Dash), Git / GitHub, Agile & sprint delivery (Wrike)

EDUCATION

Data Analytics Certificate, Rice University Bootcamp *2024*

B.S., Business Administration, University of Colorado *2023 · GPA 3.6*

PROJECTS

Power BI enrollment automation tool for a healthcare client (SQL-backed, near real-time metric tracking, manual errors reduced) · Python / Dash visualization dashboard with live updates, filtering, and export. Code at github.com/1997-wh
