SUMMARY

Data analyst with 3+ years working directly with business teams. Right now that means Patient Experience leaders across AdventHealth's markets. I take a request from a vague ask through to something somebody actually decides on: scope it, pull the data out of Snowflake myself, and build a dataset or dashboard people keep coming back to. Built the tooling that cut our monthly validation cycle from two weeks to about three days. Led the analytics team's move to AI agents, including a custom GPT that PX leaders now query on their own.

EXPERIENCE

Business Analyst I | AdventHealth *May 2025 – Present (contract, converted to full-time Aug 2025)*

- Work directly with Patient Experience (PX) leaders across AdventHealth's markets. I run requirements gathering, work out what decision the request is really for, scope it, and hand back data they can use.
- Juggle requests from several markets at once. I set expectations on what I can get done and when, and I am upfront about what the data will not tell them.
- Spearheaded AI adoption on the analytics team. Built AI agents and shaped a custom GPT that PX leaders now use to query patient experience data themselves.
- Helped design a new data model so our analytics team owns its own data. We no longer wait on another team to refresh our dashboards.
- Built two dashboards from scratch and rebuilt a legacy one on that model, consolidating several reports into a single slicer-driven view (disconnected selector table, DAX SWITCH measures).
- Automated the monthly validation of incoming Press Ganey survey data across every service line. Took it from two weeks down to about three days.
- Find my own way around Snowflake. There is not much documentation, so I profile and reconcile the data myself and chase down why a dashboard number does not match the source.
- Agile environment, sprints tracked in Wrike.

Data Analyst | FirstSource *Jan 2022 – May 2025*

- Built SQL reporting on quality, compliance trends, and vendor performance. Owned the Power BI dashboards that policy, training, and operations teams used every day.
- Took research requests from the field, dug into what was actually going on behind the number, and pulled custom data for whoever asked.
- Ran QA audits on review workflows and fed what I found back into the process.
- Explained data problems to people who do not work in data, and turned their questions into something I could query.

SKILLS

SQL & Warehouse SQL, Snowflake, data modeling, semantic / star-schema design, data validation & reconciliation

BI & Reporting Power BI (extensive), DAX, Power Query, dashboard design, metric & KPI definition, Excel

AI & Automation AI agents, custom GPTs, prompt engineering, checking agent output against source data, process automation

Also Python (Pandas, Dash), Git / GitHub, Agile & sprint delivery (Wrike)

EDUCATION

Data Analytics Certificate, Rice University Bootcamp *2024*

B.S., Business Administration, University of Colorado *2023 · GPA 3.6*

PROJECTS

Power BI enrollment automation tool for a healthcare client (SQL-backed, near real-time metric tracking, manual errors reduced) · Python / Dash visualization dashboard with live updates, filtering, and export. Code at github.com/1997-wh
